Manager of Infrastructure, Booking BV Amsterdam, The Netherlands 2017-present

Manage an organization which is responsible for the internal development workflow & ecosystem, along with a myriad of production infrastructure services. The organization consists of about 30 engineers and products owners spread across six teams.

Scope of Role within own organization:

- Determine own organization purpose, vision, objectives, and annual strategy while working with department stakeholders
- Performing change management to deal with top down and bottom up changes
- Constant planning with the teams in the org in order to ensure they are moving towards our objectives and vision. This includes both technical and non-technical conversations
- Identifying talent within the organization in order to mentor and/or coach both engineers and people managers
- Conduct difficult conversations involving mediation between engineers and underperformance
- Resource management which consists of: pivoting existing teams, disbanding teams, and making allocation requests for new teams
- Compensation manager for all within own organization

Scope of Role outside of own organization:

- Contributing to growing leaders within booking.com by creating leadership trainings and work one on one with new leaders
- Help set the department objectives and strategy
- Elected member of the Dutch works council (Ondernemingsraad, OR) for booking.com. In this capacity I represent the employees and work closely with the different business units, legal team, and HR on staff matters
- Hiring manager for both the Site Reliability Engineer and Infra Product Owner. This means meeting quarterly hiring targets while ensuring we hire the best people in the industry. Leading over 30 interviewers and a team of recruiters

Team Lead & Developer, Booking BV Amsterdam, The Netherlands Nov 2013-present

Working across IT Production and global infrastructure to automate the provisioning and deployment of servers. Developing reporting interfaces for system administrators and procurement staff. More recently been working on Service Discovery.

Scope of Role (past and present):

- Setup and maintain all the team process such as standup, regular one on ones, retrospectives, Sprint planning, and quarterly performance reviews.
- Large contributor to our internal service discovery system built in Python and on top of Apache ZooKeeper
- Developed our internal hardware discovery system (for detecting newly delivered hardware). Worked closely with the network and data center teams
- Provide visibility on infrastructure supply & demand to the business and data center operation teams

- Automation of the procurement process to allow for quick procurement of hardware components for data centers
- Manage 23 million Euro (per annum) budget

Working with the following technologies:

- Python
- Django
- NetApp Filers via Data ONTAP
- HP Proliant BL/DL class servers; extensive usage of HP iLO

IT System Engineer, Twitter Inc San Francisco, CA Nov Oct 2011-Nov 2013

Work with stakeholders to design and deploy new IT services. Responsible for most projects in developing applications for integration of different systems and automating tasks for our team. Lead architect for the world wide phone system. Reverse engineer legacy systems in order to re-create them in a way that will scale and provide redundancy. Document systems for knowledge transfer between team members.

Scope of Role:

- Work with stakeholders to evaluate & deploy new services
- Automation of tasks and reporting
- Redesign legacy system so they are documented, scale, and reliable
- Create Puppet modules for services to provide quick deployment & consistency across the fleet
- Maintain backups
- Participated in the on call rotation

Largely worked on the following services

- LDAP (OpenLDAP, Active Directory, and Open Directory)
- JAMF Suite
- ShoreTel (Handsets: Cisco, Polycom, and ShoreTel)
- CrashPlan (Internal backup system)
- Internal Applications for employees

IT System Engineer, Talend Inc Irvine, CA Feb 2009-2011

Sole System Administrator in the US with counterparts in France and Germany. Maintained and built all IT infrastructure for the US and Japan. Performed multiple office build outs in the US and worked with a small help desk team to support them. Was the main integrator of systems internally and extensively used Talend data integration tools to integrate data from different systems.

Scope of Role:

- Monitoring and maintenance of IT infrastructure which requires good problem solving skills and understanding of different technologies
